Security Policies for Mobile Devices Posted Dec 04, 2012 09:40 PM Originally published on the NPower blog, this post was written by NPower consultants seeking to provide some helpful information regarding security policies and mobile devices.

Security Policies for Mobile Devices — 501 Commons

On SANS SEC575, we will learn about mobile device infrastructures, policies and management, we will see the security models of the different platforms, like the data storage and file system architecture. We will also see how to unlock, root and jailbreak mobile devices in order to prepare

them for data extraction and further testing.

Shela: SANS SEC575 Mentor Class

The key here is to encrypt all data stored on any mobile device, whether it be a notebook computer, a PDA, a mobile phone, or a mobile storage device (for example, a USB drive or SD storage card).

How to develop security policies for mobile devices

Mobile security, or more specifically mobile device security, has become increasingly important in mobile computing. Of particular concern is the security of personal and business information now stored on smartphones.. More and more users and businesses use smartphones to communicate, but also to plan and organize their users' work and also private life.

Mobile security - Wikipedia

Fortunately, most mobile devices make it easy to disable these wireless services and stop the unnecessary broadcasting. So when you don't need them, we recommend turning them off. The same can be true of your cellular connection. Your phone is most secure when it is in airplane mode.

Mobile Devices | Cybersecurity

Install mobile anti-virus and anti-malware software on your devices. Some security apps will also set rules for blocking suspect communications. Install a personal firewall, if your security software suite doesn't supply one itself. Regularly update all your mobile apps, and install security patches to mobile operating systems and browsers.
